About Me

Unity Game Developer focused on scalable gameplay architecture, working on the combat and animation systems of **UFC: KO**.

Experience

Arvis Games, Unity Game Developer (Feb-Aug 2026: Intern)

Remote

On **UFC: KO**, a licensed UFC title for iOS published by Rollic Games and live on the App Store, from the project's first week,

Feb 2026 – present

- Co-developed the combat engine: an attack-resolution pipeline (accuracy, block, crit, dodge) resolving 35 moves, 12 buff types and 8 on-hit effect types, and a deterministic tick-driven fight loop (Zenject, R3, UniTask).
- Built the Unity Timeline-based fight animation system and its content-authoring editor tools end to end.
- Built an editor tool that imports Figma designs into Unity UI; every engineer on the team uses it when integrating UI.
- Extended the seeded headless fight simulator and built an end-to-end economy simulator on top of it: player progression is simulated match by match through the live game's command chain, and the resulting CSV reports feed balance decisions.
- Contributed to the development of the meta game (progression system, reward flows, and FTUE).

Kodland, Freelance Unity Instructor

Remote

Taught Unity and C# fundamentals to 35 students aged 11–17 in Kodland's structured 40-week curriculum.

Dec 2025 – Mar 2026

- Delivered live lessons to mixed-ability groups, adapting pacing and explanations to each student's current level.
- Guided students from blank Unity project to playable prototype, debugging C# and gameplay logic alongside them.

Projects

Check and Defend (Itch.io)(Video)

May 2026

2D Chess Tower-Defense, 1st place at Yıldız Jam 2026. Unity 6.3, 48-hour jam.

- Wrote the turn-based combat loop, BFS grid pathfinding with line-of-sight checks and chess-value enemy targeting on a layered MVC architecture (Zenject DI and signal bus, ScriptableObject config, UniTask).

Less is More (Itch.io)(GitHub)(Video)

Dec 2025

2D Platformer, 1st place at the BTK Academy Advanced Unity Bootcamp Jam. 24-hour jam.

- Built the death-persistence system that turns every death into a solid, permanent platform; a per-level death budget forces the player to plan which death to spend where.

Raze Maze (Itch.io)(GitHub)(Video)

Dec 2025

3D Puzzle-Platformer, top 20 of 255 entries at StartGate'25 Jam. 48-hour jam.

- Built the sonar-like "sniff" vision system that briefly lights a pitch-black maze; collected cheese scales view radius, pulse range and memory duration across six tiers.

Skills

Technical Skills: C# (OOP, SOLID, MVC), Unity (2D/3D, URP), Git & GitHub, Figma

Unity Skills: Dependency Injection (Zenject), DOTween, R3 Reactive Extensions, UniTask, Object Pooling, Editor Tooling

Languages: Turkish (Native), English (Fluent)

Education

BSc Istanbul Aydın University, Software Engineering

- GPA: 3.37/4.00

Istanbul, Türkiye

Sept 2021 – July 2026

Google Artificial Intelligence and Technology Academy, Game Development

Remote

Dec 2024 – Aug 2025
